# Trademarks

## Trademarks:

- LightWave and LightWave 3D are registered trademark of NewTek, Inc in the United States and/or other countries.
- Ethernet is a registered trademark of XEROX Corporation in the United States.
- FCRAM is a trademark of Fujitsu Microelectronics Limited, Japan.
- FerVID family is a trademark of Fujitsu Microelectronics Limited, Japan.
- MirrorBit is a trademark of Spansion Inc.
- SPANSION is a trademark of Spansion Inc.
- Amplify is a registered trademark of Synplicity, Inc.
- “Purchase of Fujitsu Microelectronics I<sup>2</sup>C components conveys a license under the Philips I<sup>2</sup>C Patent Rights to use these components in an I<sup>2</sup>C system, provided that the system conforms to the I<sup>2</sup>C Standard Specification as defined by Philips.”

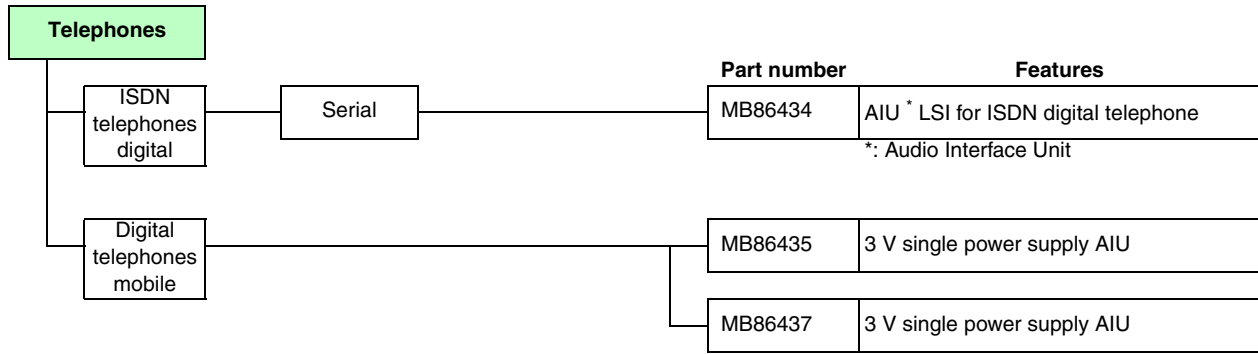

Other company names and brand names are the trademarks or registered trademarks of their respective owners.

## Communication Control

### ISDN

Part number	Functions	Communication standard	Power supply voltage (V)	Package
				QFP
MB86434	AIU LSI for ISDN digital telephones, Internal CODEC, DTMF tones, service tone, and ringer tone	-	+5 ± 5%	64P

Package: P - Plastic

### IP Packet Processing Engine

Part number	Functions	Power supply voltage (V)	Package
			LQFP
MB86977	Enable to process following functions with hardware. IP Packet Forwarding Packet Filtering NAT PPPoE and more. Supports QoS, DMZ, IPv6 and more. 10/100M MAC (Conforms to IEEE802.3)	3.3 ± 0.3 1.8 ± 0.15	208P

Package: P - Plastic

### High Speed IP sec Processing Engine

Part number	Functions	Power supply voltage (V)	Package
			FBGA
MB86978	Inline Ipsec processing, DES / 3DES, AES, HMAC - SHA-1, HMAC-MD5, SA:64, IPv6, 10 / 100M MAC	3.3 ± 0.3 1.8 ± 0.15	337P 288P

Package: P - Plastic

## Communication Network

### LAN

Part number	Functions	Communication standard	Power supply voltage (V)	Package
				LQFP
MB86967	10BASE-T Ethernet controller with PC card interface, ISA bus interface and General purpose bus interface	Conforms to IEEE 802.3	+5 ± 5%	100P

Note: Ethernet is a registered trademark of XEROX Corporation of the USA.

Package: P - Plastic

# Display Control Products

Display Control Products	Screen display control	OSDC	Application	Part number	Features
			TV	MB90050	512 character sets, 24 × 32 dot matrix, 35 characters × 16 lines (560 characters) display, 16 colors, Independently specifiable for each character, Shaded background, Sprite display, Video signal generator for the NTSC and PAL system, Composite video and Y/C video, 5 V power supply voltage
				MB90096	512 character sets, 24 × 32 dot matrix, 32 characters × 16 lines (512 characters) display, 16 colors, Independently specifiable for each character, Shaded background, Sprite display, Command table ROM 16KB, 5 V power supply voltage
			LCD display	MB90098A	512 character sets, 24 × 32 dot matrix, 32 characters × 16 lines (512 characters) display, 16 colors, Independently specifiable for each character, Shaded background, Sprite display, Command table ROM 16KB, 2 pixel parallel output, 3.3 V power supply voltage
			Camcorder/ Digital Still Camera	MB90097	512 character sets, 12 × 18 dot matrix, 28 characters × 12 lines (336 characters) display, 16 colors, Independently specifiable for each character, Shaded background, Sprite display, Three output control, 3.3 V power supply voltage
				MB90099	1024 character sets, 12 × 18 dot matrix, 28 characters × 12 lines (336 characters) display, 16 colors, Independently specifiable for each character, Shaded background, Sprite display, Three output control, 3.3 V power supply voltage
			General purpose	MB90092	16384 character sets (external ROM), 24 × 32 dot matrix, 24 characters × 12 lines (288 characters) display, 8 colors, Independently specifiable for each character, Shaded background, Sub screen display, Video signal generator for the NTSC and PAL system, Composite video and Y/C video, 5 V power supply voltage

			CS91 series	More than 48,000,000 (on-chip) gates with on-chip RAM, ROM, Multipliers, ADC/DAC	76
			CS86 series	More than 40,000,000 (on-chip) gates with on-chip RAM, ROM, FIFO, Delay Line, ADC/DAC	77
			CS81 series	More than 40,000,000 (on-chip) gates, 11 ps/gate with on-chip RAM, ROM, Multipliers, ADC/DAC	78
			CS66 series	More than 1,700,000 (on-chip) gates, 98 ps/gate with on-chip RAM, ROM, Multipliers, ADC/DAC	79
	Macro-embedded type cell arrays	CMOS	CE81 series	Maximum of 34,000,000 (on chip) gates, 12 ps/gate with on-chip RAM, ROM, Multipliers, ADC/DAC	81
			CE77 series	Maximum of 10,000,000 (on chip) gates, 33 ps/gate with on-chip RAM, ROM, FIFO, Delay Line	82
			CE71 series	Maximum of 8,096,000 (on chip) gates, 29 ps/gate with on-chip RAM, ROM, Multipliers, ADC/DAC	84
			CE66 series	Maximum of 1,138,000 (on-chip) gates, 98 ps/gate with on-chip RAM, ROM, Multipliers, ADC/DAC.	86
			CE61 series	Maximum of 2,025,000 (on chip) gates, 85 ps/gate with on-chip RAM/ROM, Multipliers, ADC/DAC	88
	Gate arrays	Sea-of-Gate CMOS	CG61 series	Maximum of 1,568,000 (on chip) gates, 85 ps/gate with on-chip RAM, Analog PLL embedment is possible in some frames	90
			CG47 series	Maximum of 55,000 (on chip) gates, 300 ps/gate with on-chip RAM, FIFO	91
			CG46 series	Maximum of 198,000 (on chip) gates, 300 ps/gate with on-chip RAM, FIFO	92

# Standard Cell

## ■ CS201 Series

### Features

Technology : 65 nm Si-gate CMOS  
6- to 12-metal layers. Low-k (low permittivity) inter-layer insulation film material is used for all layers.  
Consolidation of all 3 kinds of set of cell (energy-saving version to high-velocity version) is possible.

Supply voltage : +1.2 V  $\pm$  0.1 V , +1.0 V  $\pm$  0.1 V

Junction temperature range : -40 °C to +125 °C

Reduced chip sized realized by I/O with pad.

Supports a wide range of cell sets (from low power versions to high speed versions)

IP macros : CPU (ARM11, ARM9, ARM7TDMI), DSP, PCI, IEEE1394, USB, IrDA, PLL, ADC, DAC, and others

Compiled cells (RAM/ROM and others)

It supports energy-saving mode, multi mode SRAM.

It supports energy-saving technology "CoolAdjust"

Supports large capacity memory (1T-SRAM-Q)

High-speed interface macro (up to 10 Gbps)

Special interfaces (LVDS, SSTL and others)

Supports use of industry standard libraries (. LIB)

Uses industry standard tools and supports the optimum tools for the application.

High reliability design estimation in the early stage of physical design realized by physical prototyping tool.

Layout synthesis with optimized timing realized by physical synthesis tools.

Hierarchical design environment for supporting large-scale circuits.

High accuracy design environment considering dynamic drop in power supply voltages, signal noise, delay penalty, and crosstalk.

I/O design environment (power line design, assignment and selection of I/Os, package selection) considering noise.

Supports static timing sign-off

Improved timing settling by introducing Statistical Timing Analysis (SSTA).

Steady product supply and countermeasure for diffusion by introduction of DFM

Supports memory (RAM/ROM) BIST

Supports boundary SCAN

Supports LOGIC BIST

Supports transition delay test

Optimum of package lineup : TEBGA, FBGA, PBGA, FC-BGA

\*: "CoolAdjust" is a generic name of Fujitsu Microelectronics's energy-saving technology

Note: Some items are in preparation.

## ■ CS101 Series

### Features

- Optimum gate count : Maximum of 91,000,000 gates
- Technology : 90 nm Si-gate CMOS
  - 6- to 10-metal layers. Low-k (low permittivity) inter-layer insulation film material is used for all layers.
  - 3 types of transistors (low leak, standard, high speed) can be mixed on a chip.
  - The design rules comply with industry standard processes.
- Supply voltage : +1.2 V  $\pm$  0.1 V, +1.0 V  $\pm$  0.1 V
- Junction temperature range : -40 °C to +125 °C (normal)
- Gate delay time : tpd = 12 ps (1.2 V, Inverter, F/O = 1)
- Gate power consumption : Pd = 2.7 nW/MHz/BC (1.2 V, Inverter, F/O = 1)
- Reduced chip sized realized by I/O with pad.
- Supports a wide range of cell sets (from low power versions to high speed versions)
- Compliance with industry standard design rules enables non-Fujitsu commercial macros to be easily incorporated.
- IP macros : CPU (ARM9, ARM7TDMI) , DSP, PCI, IEEE1394, USB, IrDA, PLL, ADC, DAC, and others
- Compiled cells (RAM/ROM and others)
- High-speed interface macro (up to 10 Gbps)
- Special interfaces (LVDS, SSTL\_2 and others)
- Supports use of industry standard libraries (. LIB)
- Uses industry standard tools and supports the optimum tools for the application.
- High reliability design estimation in the early stage of physical design realized by physical prototyping tool.
- Layout synthesis with optimized timing realized by physical synthesis tools.
- Hierarchical design environment for supporting large-scale circuits.
- High accuracy design environment considering drop in power supply voltages, signal noise, delay penalty, and crosstalk.
- I/O design environment (power line design, assignment and selection of I/Os, package selection) considering noise.
- Supports static timing sign-off
- Supports memory (RAM/ROM) BIST
- Supports boundary SCAN
- Supports LOGIC BIST
- Supports transition delay test

Optimum of package lineup : TEBGA, FBGA, PBGA, FC-BGA

Note: Some items are in preparation.

# Standard Cell

## ■ CS91 Series

### Features

- Optimum gate count : Maximum of 48,000,000 gates
- Technology : 0.11  $\mu\text{m}$  Si-gate CMOS, 5- to 8-layer wiring (Copper is used as wire material) ,  
Low-k Inter-layer material  
(Inter-layer material that has low permittivity)
- Supports 8 types of cell sets that differ in speed, integration, and power consumption.  
These cell sets can be mixed on a chip.
- Supply voltage : +1.2 V  $\pm$  0.1 V (normal)
- Junction temperature range : -40 to +125  $^{\circ}\text{C}$
- Gate delay time :  $t_{pd} = 16$  ps (1.2 V, Inverter, F/O = 1)
- Gate power consumption :  $P_d = 6.6$  nW/MHz (1.2 V, Inverter, F/O = 1)
- High-speed interface macro (up to 10 Gbps)
- Special interfaces: P-CML, LVDS, PCI, USB, SSTL, HSTL, T-LVTTL, and others
- Buffer cells for crystal oscillation circuits.
- IP macros : CPU (ARM9, ARM7TDMI) , DSP, PCI, IEEE1394, USB, IrDA, PLL, ADC, DAC, and others
- Compiled cells (RAM/ROM/multiplier and others)
- Uses industry standard tools and supports the optimum tools for the application.
- Short-term development using a physical prototyping tool.
- Hierarchical design environment for supporting large-scale circuits.
- Supports Signal Integrity, EMI noise reduction
- Supports High resolution RC extraction base delay calculation environment
- Supports optimization environment of power supply wire
- Supports static timing sign-off
- Supports memory (RAM/ROM) BIST
- Supports boundary SCAN
- Supports LOGIC BIST
- Supports transition delay test
- A variety of package options : FC-BGA (Max. 2116 pin), EBGA, HQFP, FBGA and others

Note: Some items are in preparation.

## CS86 Series

### Features

Optimum gate count : Maximum of 40,000,000 gates  
 Technology : 0.18  $\mu\text{m}$  Si-gate CMOS, 4- to 6-layer wiring  
 Supports three types of internal cell sets (ultra high-speed, standard, low-leak)  
 Capable of integrating a mixture of standard transistor cell and ultra high-speed process/cell, and mixture of standard transistor cell and low leak process/cell on a single chip

Supply voltage : +1.8 V  $\pm$  0.15V (normal) to +1.1V  $\pm$  0.1V  
 Gate delay time : tpd = 88 ps (standard : 1.8 V, 2NAND, F/O = 2, standard load)  
 tpd = 70 ps (ultra high-speed : 1.8 V, 2NAND, F/O = 2, standard load)  
 tpd = 136 ps (low-leak : 1.8 V, 2NAND, F/O = 2, standard load)  
 Leakage Current : 0.023 nW (standard : 1.8 V, 2NAND, F/O = 0, no load)  
 3.922 nW (ultra high-speed : 1.8 V, 2NAND, F/O = 0, no load)  
 0.0067 nW (low-leak : 1.8 V, 2NAND, F/O = 0, no load)  
 Gate power consumption : 40.1 nW/MHz (standard : 1.8 V, 2NAND, F/O = 1, 4Grid)  
 42.7 nW/MHz (ultra high-speed : 1.8 V, 2NAND, F/O = 1, 4Grid)  
 38.3 nW/MHz (low-leak : 1.8 V, 2NAND, F/O = 1, 4Grid)

Junction temperature range : -40 to +125  $^{\circ}\text{C}$

Output buffer cells with noise reduction circuits

Inputs with on-chip input pull-up/pull-down resistors and bidirectional buffer cells.

Buffer cells for crystal oscillation circuits.

Special interfaces : SSTL2, PCI, P-CML, T-LVTTL, USB2.0, IEEE1394, and others

IP macros : CPU (FR-V, ARM9, and others), DSP, PCI, IEEE1394, USB2.0, IrDA, PLL, ADC, DAC, and others

Compiled cells (RAM/ROM/FIFO/Delay line, and others)

Configurable internal bus circuits

Advanced for hardware/software co-design environment

Short-term development using a physical synthesis tool

Low-power dissipation using a low power synthesis tool

Short-term development using a timing driven layout tool

Hierarchical design environment for supporting large-scale circuits

Supports signal Integrity

Supports memory (RAM, ROM) SCAN

Supports memory (RAM) BIST

Supports boundary SCAN

Supports path delay test

Supports transition delay test

A variety of package options (QFP, TQFP, LQFP, HQFP, PBGA, FBGA, FLGA, EBGA)

Note: Some items are in preparation.

## Packages

The table below lists the available package types.

Type	Pin Count	Material
QFP	176, 208, 240	Plastics
TQFP	100, 120	Plastics
LQFP	144, 176, 208, 256	Plastics
HQFP	208, 240, 256, 304	Plastics
PBGA	256, 352, 420	Plastics
FBGA	112, 144, 168, 176, 192, 224, 272, 288, 240, 304, 368	Plastics
FLGA	144, 176, 208, 224, 288	Plastics
EBGA	660	Plastics

Note: This list contains packages under planning. Contact Fujitsu Microelectronics for the availability.

# Standard Cell

## ■ CS81 Series

### Features

Optimum gate count : Maximum of 40,000,000 gates  
Technology : 0.18  $\mu\text{m}$  Si-gate CMOS, 3- to 6-layer wiring  
Capable of integrating a mixture of high-speed processes and cells on a single chip  
Supply voltage : +1.8 V  $\pm$  0.15V (normal) to +1.1V  $\pm$  0.1V  
Gate delay time : tpd = 11 ps (1.8 V, Inverter, F/O = 1)  
Gate power consumption : 5nW/MHz/BC (1.1V, 2NAND, F/O = 1)  
Junction temperature range : -40 to +125  $^{\circ}\text{C}$   
High-speed interface macro (up to 3.125 Gbps)  
Output buffer cells with noise reduction circuits  
Inputs with on-chip input pull-up/pull-down resistors (33 k $\Omega$  typical) and bidirectional buffer cells.  
Buffer cells for crystal oscillation circuits.  
Special interfaces: P-CML, LVDS, PCI, AGP, USB, SDRAM-I/F, SSTL, and others  
IP macros: CPU, DSP, PCI, IEEE1394, USB, IrDA, PLL, ADC, DAC, and others  
Compiled cells (RAM/ROM/multiplier, and others)  
Configurable internal bus circuits  
Advanced for hardware/software co-design environment  
Short-term development using a timing driven layout tool  
Supports static timing sign-off  
Dramatically reducing the time for generating test vectors for timing verification and the simulation time  
Hierarchical design environment for supporting large-scale circuits  
Simulation (before layout) considering the input through rate and high resolution RC extraction base delay calculation (after layout), supporting development with minimized timing trouble after trial manufacture.  
Supports signal Integrity, EMI noise reduction  
Supports memory (RAM, ROM) SCAN  
Supports memory (RAM) BIST  
Supports boundary SCAN  
Supports At-Speed test on internal circuits  
Supports path delay test  
Supports transition delay test  
A variety of package options (TQFP, HQFP, EBGA, FBGA, TAB-BGA, FC-BGA, LQFP)

Note: Some items are in preparation.

## Packages

The table below lists the available package types.

Type	Pin Count	Material
TAB-BGA	304, 352, 480 560, 660, 720	Plastics
EBGA	576, 660, 672	Plastics
HQFP	208, 240, 256, 304	Plastics
TQFP	100, 120	Plastics
LQFP	144, 176, 208	Plastics
FBGA	288	Plastics
FC-BGA	1089, 1225, 1369, 1681, 1849, 2116	Plastics, Ceramic

Note: This list contains packages under planning. Contact Fujitsu Microelectronics for the availability.

# Macro-Embedded Type Cell Arrays

## ■ CE81 Series

### Features

- High Integration : Maximum of 34,000,000 BCs
- Technology : 0.18  $\mu\text{m}$  Si-gate CMOS, 4- to 5-layer wiring
- Supply voltage : +1.8 V  $\pm$  0.15 V (normal) to +1.1 V  $\pm$  0.1 V
- Gate delay time : tpd = 12 ps (1.8V, Inverter, F/O = 1)
- Gate power consumption : 8nW/MHz/BC (1.1V, 2NAND, F/O = 1)
- Junction temperature range : -40 to +125  $^{\circ}\text{C}$
- Output buffer cells with noise reduction circuits
- Inputs with on-chip input pull-up/pull-down resistors (33 k $\Omega$  typical) and bidirectional buffer cells.
- Buffer cells for crystal oscillation circuits.
- Special interfaces: P-CML, LVDS, PCI, AGP, USB, SDRAM-I/F, SSTL, and others
- IP macros: CPU, DSP, PCI, IEEE1394, USB, IrDA, PLL, ADC, DAC, and others
- Compiled cells (RAM/ROM/multipliers, and others)
- Configurable internal bus circuits
- Advanced for hardware/software co-design environment
- Short-term development using a timing driven layout tool
- Supports static timing sign-off
- Dramatically reducing the time for generating test vectors for timing verification and the simulation time.
- Hierarchical design environment for supporting large-scale circuits
- Supports optimization environment of power supply wire
- Simulation (before layout) considering of the input through rate and high resolution RC extraction base delay calculation (after layout), supporting development with minimized timing trouble after trial manufacture.
- Supports Signal Integrity
- Supports memory (RAM, ROM) SCAN
- Supports memory (RAM) BIST
- Supports boundary SCAN
- Supports At-Speed test on internal circuits
- Supports path delay test
- Supports transition delay test
- A variety of package options (TQFP, HQFP, EBGA, FBGA, TAB-BGA, LQFP)
- Note: Some items are in preparation.

# Macro-Embedded Type Cell Arrays

## ■ CE77 Series

### Features

- High integration : Maximum of 10,000,000 BCs
- Technology : 0.25 μm Si-gate CMOS, 3- to 4-layer wiring
- Supply voltage : +2.5 V ± 0.2 V (normal) to +1.5 V ± 0.1 V
- Junction temperature range : -40 to +125°C
- Gate delay time :  $t_{pd} = 33$  ps (2.5 V, Inverter, F/O = 1, No load)
- Gate power consumption : 0.02 μW/MHz (1.5 V, Inverter, F/O = 1, No load)
- High-load driving capability :  $I_{OL} = 2\text{mA}/4\text{mA}/8\text{mA}/12\text{mA}$  mixable.
- Output buffer cells with noise reduction circuits
- Inputs with on-chip input pull-up/pull-down resistors (25 kΩ typical) and bidirectional buffer cells.
- Buffer cells for crystal oscillation circuits.
- Special interfaces (P-CML, LVDS, T-LVTTL, SSTL, PCI, USB, GTL+, and others)
- IP macros (CPU, PCI, USB, IrDA, PLL, DAC, ADC, and others)
- Compiled cells (RAM/ROM/FIFO/Delay Line, and others)
- Configurable internal bus circuits
- Advanced for hardware/software co-design environment
- Short-term development using a timing driven layout tool
- Hierarchical design environment for supporting large-scale circuits
- Supports static timing sign-off
- Dramatically reducing the time for generating test vectors for timing verification and the simulation time.
- Simulation (before layout) considering the input through rate and detailed RC delay calculation (after layout), supporting development with minimized timing trouble after trial manufacture.
- Supports memory (RAM, ROM) SCAN
- Supports memory (RAM) BIST
- Supports boundary SCAN
- Supports path delay test
- A variety of package options (SQFP, LQFP, HQFP, FBGA, PBGA)

Note: Some items are in preparation.

ASIC

# Macro-Embedded Type Cell Arrays

## ■ CE71 Series

### Features

- High integration : Maximum of 8,000,000 BCs
- Technology : 0.25  $\mu\text{m}$  Si-gate CMOS, 3- to 4-layer metal wiring
- Supply voltage : +2.5 V  $\pm$  0.2 V (normal) to +1.5 V  $\pm$  0.1 V  
(5 V TTL interface is available if 5 V tolerant I/O is adopted. Some frames are under development.)
- Gate delay time :  $t_{pd} = 29$  ps (2.5 V, Inverter, F/O = 1, No load)
- Gate power consumption : 0.060  $\mu\text{W}/\text{MHz}$  (F/O = 1, No load)
- Junction temperature range : -40 to +125°C
- High-load driving capability :  $I_{OL} = 2$  mA/4 mA/8 mA/12 mA mixable.
- Output buffer cells with noise reduction circuits
- Inputs with on-chip input pull-up/pull-down resistors (25 k $\Omega$  typical) and bidirectional buffer cells.
- Buffer cells for crystal oscillation circuits.
- Special interfaces (P-CML, LVDS, SDRAM-I/F, SSTL, and others)
- IP macros (SPARClike, FR40, F<sup>2</sup>MC16LX, PCI, IEEE1394, USB, IrDA, PLL, ADC/DAC, and others)
- Compiled cells (RAM/ROM/multipliers, and others)
- Configurable internal bus circuits
- Advanced for hardware/software co-design environment
- Linking floor plan tools and logic synthesis tools allows automatic optimization of the circuits using the floor plan information. The Clock Driven Design Method (CDDM) clock tree synthesis tools using the floor plan information are also available. Using the floor plan information in the pre-layout stage would eliminate the problems of setup after layout or timing problems for hold, significantly reducing the time to market.
- Supports the static timing sign off using the Synopsys CAD tool Prime Time. This contributes to the considerable reduction of time required for test vector creation for timing verification and the simulation time.
- Simulation (before layout) considering the input through rate and detailed RC delay calculation (after layout), supporting development with minimized timing trouble after trial manufacture.
- Supports memory (RAM, ROM) SCAN
- Supports memory (RAM) BIST
- Supports boundary SCAN
- A variety of package options (SQFP, LQFP, HQFP, PBGA, EBGA, TAB-BGA, FBGA)

Note: Some items are in preparation.

# Macro-Embedded Type Cell Arrays

## ■ CE66 Series

### Features

- High integration : Maximum of 1,138,000 BCs
- Technology : 0.35  $\mu\text{m}$  Si-gate, 3- to 4-layer metal wiring
- Supply voltage : +3.3 V  $\pm$  0.3 V (normal) to +2.0 V  $\pm$  0.1 V
  - +5.0 V  $\pm$  10% (only for external interface; when internal requirements is 3.3 V)
  - +3.3 V  $\pm$  10% (only for external interface; when internal requirements is 3.3 to 2.0 V)
- Gate delay time :  $t_{pd} = 98$  ps (high-speed type, F/O = 2, standard load)
- Gate power consumption : 0.29  $\mu\text{W}/\text{MHz}$  (F/O = 2, standard load)
- Junction temperature range : - 40 to 125°C
- High-load driving capability :  $I_{OL} = 2$  mA/4mA/8mA/12mA/24mA mixable.
- Output buffer cells with noise reduction circuits
- On-chip input pull-up/pull-down resistors (50 k $\Omega$  typical)
- Buffer cells dedicated to crystal oscillator
- Configurable internal bus circuits
- Highly integrated RAM/ROM/multipliers mountable; arbitrary words/bits configurable.
- Clock skew layout design method (CDDM) based on the floor plan information minimizes post-layout circuit modification, reducing turnaround time for development.
- Simulation (before layout) considering the input through rate and detailed RC delay calculation (after layout), supporting development with minimized timing trouble after trial manufacture.
- Special interfaces (T-LVTTL and SDRAM-I/F, and others)
- Analog PLL
- Analog circuits (ADC, DAC, OPAMP and others)
- Macros for system ASICs (CPU core, CPU peripheral, operational macros, and others)
- Supports DFF scan test with MUX
- Supports memory (RAM/ROM) SCAN
- Supports memory (RAM) BIST
- Supports boundary SCAN

Note: Some items are in preparation.

## Number of gates used in each package

The table below lists the available package types and the reference number of gates used.

CE66 (P-frame)

Note: This list contains packages under planning.

CE66 (S-frame)

Note: This list contains packages under planning.

# Macro-Embedded Type Cell Arrays

## ■ CE61 Series

### Features

- High Integration Technology : Maximum of 2,000,000 BCs  
: 0.35  $\mu\text{m}$  Si-gate 3-layer metal wiring/4-layer metal wiring  
(There are restrictions applicable frames)
- Basic circuit (basic cell) : 2-input NAND/2-input NOR gates
- Supply voltage : +3.3 V  $\pm$  0.3 V (normal) to +2.0 V  $\pm$  0.1 V  
High voltage tolerant transistor for I/O; interface provided for 5 V devices  
(Also requiring a 5 V power supply for interface with 5 V devices)
- Gate delay time : High-speed type,  $t_{pd} = 85$  ps (2-input NAND, F/O = 2, standard load)
- Junction temperature range : 0 to +100°C
- High-load driving capability :  $I_{OL} = 2$  mA/4 mA/8 mA/12 mA/24 mA mixable.
- Power consumption : Reduced to 50% to 20% (over the CE51 Series)
- Output buffer cells with noise reduction circuits
- On-chip input pull-up/pull-down resistors (Typ. 50k $\Omega$ )
- Buffer cells for crystal oscillation circuits.
- Configurable internal bus circuits
- Super high-integration RAM and ROM available. Compilable bit/word configuration
- Clock skew reduction layout design technique (CDDM) employed to minimize circuit modification after layout, reducing TAT
- Simulation (before layout) considering the input through rate and detailed RC delay calculation (after layout), supports development with minimized timing trouble after trial manufacture.
- Supports high speed interfaces [P-CML (200 MHz transmission), LVDS (250 MHz transmission), and SDRAM I/F, PCI, 5 V tolerant, USB, IEEE 1284]
- PLL circuits
- Analog circuits (ADC, DAC)
- Macros for system ASICs (CPU core and CPU peripheral and operational macros, and others)
- Supports tests (for function/DC) using DFF scan with MUX
- Supports the test for RAM BIST, RAM SCAN and ROM SCAN
- Supports the Boundary SCAN
- Now under preparation on for a narrow-pitch pad technology and high-pin count BGA packages to be added to the current lineup
- Variety of package options to optimize any gate size

Note: Some items are in preparation.

# Sea-of-Gate Type CMOS Gate Arrays

## ■ CG61 Series (Analog PLL embedment is possible in some frames)

### Features

- High Integration : 1,560,000 BCs
- Technology : 0.35  $\mu\text{m}$  Si-gate CMOS, 3-layer metal wiring
- Basic circuit (basic cell) : 2-input NAND/2-input NOR gates
- Supply voltage : +3.3 V  $\pm$  0.3 V (normal) to +2.0 V  $\pm$  0.1 V  
(5 V TTL interface is possible when 5 V tolerant I/Os are used.)
- Gate delay time :  $t_{pd} = 85$  ps (3.3 V, 2-input NAND, F/O = 2, standard load)
- Gate power dissipation : 0.24  $\mu\text{W}/\text{MHz}$  (2.0 V, 2-input NAND, F/O = 2, standard load)
- Junction temperature range : 0 to +100  $^{\circ}\text{C}$
- High-load driving capability :  $I_{OL} = 2$  mA/4 mA/8 mA/12 mA/24 mA mixable
- Output buffer cells with noise reduction circuits
- On-chip input pull-up/pull-down resistors (Typ. 50 k $\Omega$  <at 3.3 V>)
- Buffer cells for crystal oscillation circuits
- Configurable internal bus circuits
- Compiled RAM can be embedded. Compatible bit/word configuration
- An analog PLL can be embedded in CG61P only.
- Clock skew reduction layout design technique (CDDM) employed to minimize circuit modification after layout, reducing TAT
- Simulation (before layout) considering the input through rate and detailed RC delay calculation (after layout), supports development with minimized timing trouble after trial manufacture.
- Supports high speed interfaces (T-LVTTL, P-CML, LVDS, SDRAM I/F)
- Supports tests using DFF scan with MUX
- Supports the test for RAM BIST and RAM SCAN

### Number of gates used in each package

The table below lists the available package types and the reference number of gates used.

# Sea-of-Gate Type CMOS Gate Arrays

## ■ CG47 Series

### Features

High integration : Maximum 55,000 BCs (on chip)  
 Technology : 0.65 μm Si-gate CMOS, 2-layer metal wiring  
 Gate delay time : 300ps (power type 2-input NAND, standard load)  
 Supply voltage : [Single power supply] +5 V ± 5%(normal), +3.3 V ± 0.3 V (normal)  
 [Dual power supply] Internal domain: +3.3 V ± 0.3 V, +5 V ± 5% (cannot be mixed)  
 I/O: +3.3 V ± 0.3 V, +5 V ± 5% (can be mixed)

Interface enabled between dual power sources

Low power consumption enabled by operating internal supply voltage at 3.3V.

Delay time estimation by detailed time equations

Detailed time equations can be used for the estimation of delay time closer to that of actual devices.

Buffer cells for crystal oscillations circuits

Supports separate low frequency (32 kHz), and high frequency (1 to 40MHz) buffers, and oscillator stop function.

Supports output open drain cell and input fail safe cells

Compiled cells include single port RAM, dual port RAM, and FIFO memory.

Note: The type of the RAM that can be used is specified depending on the internal power supply when the RAM is a single-port RAM.

HISCAN (scan circuit automatic generation function)

HISCAN is supported with single power supply, but dual power supply specifications and HISCAN are mutually exclusive.

Simple interface

CAD-to-CAD interface uses special language for logic data (FLDL) and test data (FTDL).

Integrated development tools

### Number of gates used in each package

The table below lists the available package types and the reference number of gates used.

# Sea-of-Gate Type CMOS Gate Arrays

## ■ CG46 Series

### Features

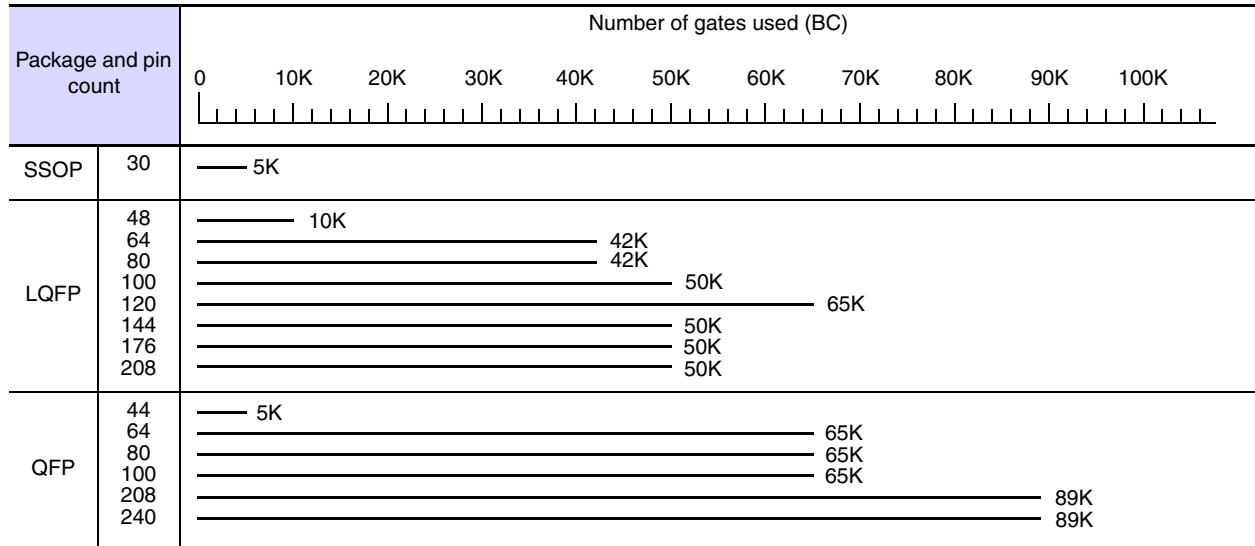

- High integration : Maximum 198,084 BCs (on chip)
- Technology : 0.65  $\mu\text{m}$  Si-gate CMOS, 2-layer metal wiring
- Basic circuit (basic cell) : 2-input NAND/2-input NOR gates
- Input level : TTL/CMOS level mixable
- Supply voltage : +5 V  $\pm$  5% (normal)  
+3.3 V  $\pm$  0.3 V (optional)
- Gate delay time : Standard gate tpd = 360 ps (2-input NAND, standard load)  
Power gate tpd = 300 ps (2-input NAND, standard load)
- Operating temperature : 0 to +70°C
- High-load driving capability :  $I_{OL}$  = 3.2 mA/8 mA/12 mA/24 mA mixable
- Output buffer cells with noise reduction circuits
- On-chip input pull-up/pull-down resistors (Typ. 50 k $\Omega$ )
- Buffer cells for crystal oscillations circuits
- Configurable internal bus circuits
- RAM and FIFO memory allowing arbitrary bit/word configuration
- Clock skew reduction layout design technique (CDDM) employed to minimize circuit modification after layout, reducing the period of time for development
- Detailed RC delay calculation minimized timing trouble after trial manufacture.
- Supports ATG (Automatic Test Generation) based on scan design
- Supports HISCAN (automatic scan generation)
- Simplified interface: CAD-to-CAD interface uses special language for logic data (FLDL) and test data (FTDL) .
- Integrated development tools

# Sea-of-Gate Type CMOS Gate Arrays

All Rights Reserved.

The contents of this document are subject to change without notice.

Customers are advised to consult with sales representatives before ordering.

The information, such as descriptions of function and application circuit examples, in this document are presented solely for the purpose of reference to show examples of operations and uses of FUJITSU MICROELECTRONICS device; FUJITSU MICROELECTRONICS does not warrant proper operation of the device with respect to use based on such information. When you develop equipment incorporating the device based on such information, you must assume any responsibility arising out of such use of the information.

FUJITSU MICROELECTRONICS assumes no liability for any damages whatsoever arising out of the use of the information.

Any information in this document, including descriptions of function and schematic diagrams, shall not be construed as license of the use or exercise of any intellectual property right, such as patent right or copyright, or any other right of FUJITSU MICROELECTRONICS or any third party or does FUJITSU MICROELECTRONICS warrant non-infringement of any third-party's intellectual property right or other right by using such information. FUJITSU MICROELECTRONICS assumes no liability for any infringement of the intellectual property rights or other rights of third parties which would result from the use of information contained herein.

The products described in this document are designed, developed and manufactured as contemplated for general use, including without limitation, ordinary industrial use, general office use, personal use, and household use, but are not designed, developed and manufactured as contemplated (1) for use accompanying fatal risks or dangers that, unless extremely high safety is secured, could have a serious effect to the public, and could lead directly to death, personal injury, severe physical damage or other loss (i.e., nuclear reaction control in nuclear facility, aircraft flight control, air traffic control, mass transport control, medical life support system, missile launch control in weapon system), or (2) for use requiring extremely high reliability (i.e., submersible repeater and artificial satellite).

Please note that FUJITSU MICROELECTRONICS will not be liable against you and/or any third party for any claims or damages arising in connection with above-mentioned uses of the products.

Any semiconductor devices have an inherent chance of failure. You must protect against injury, damage or loss from such failures by incorporating safety design measures into your facility and equipment such as redundancy, fire protection, and prevention of over-current levels and other abnormal operating conditions.

Exportation/release of any products described in this document may require necessary procedures in accordance with the regulations of the Foreign Exchange and Foreign Trade Control Law of Japan and/or US export control laws.

The company names and brand names herein are the trademarks or registered trademarks of their respective owners.
