Spec for Ultrasonic transducer	Drawing No.	Rev. No.
Model: JYYT100B14AD0G8-T0	UT-014	A1
Drawing	Approval	Sales Dept.

佛山金涛峪电子科技有限公司

Foshan Jintaoyu Electronics Technology Co., Ltd

1. Application :

This ultrasonic transducer is widely used for cosmetic.

2 . Part No : JYYT100B14AD0G8-T0

3. Appearance and Dimension:

unit:mm

4. Electronic Performance :

No.	Item	Unit	Specification	Test Instruments
1	Thickness Resonant Frequency (Fr)	MHz	1.00±0.02	Agilent 4294A
2	Thickness Resonant Impedance (Zr)	Ω	≤3.0	
3	Electrostatic Capacitance (Co)	pF	1200±25%	at 1000Hz/10Vrms 25°C Digital electric bridge
4	Dielectric Loss (tanδ)	/	≤2.0%	Agilent 4294A
5	D33	/	≥ 400	Impedance analyzer

Test Conditions: The Ceramic element should be measured under a condition,

Temp: 25±3°C and Humidity:40% ~ 70%R.H.

5. Standard Package:

Qty/Carton (pcs)	Carton Size (cm)	G.W. (Kg)	N.W (kg)
5000	36.7×32.7×20.5	14.5	13.5

6 . Notes

1. The ultrasonic transducer should be packed completely in the closed environment, there is no acidic, alkaline, or other corrosive gases around it, no strong mechanical vibration or magnetic field in the warehouse.
2. Because strong impact stress on the transducer leads to damage the appearance and damage the electronic performance of it , so please take it with care to prevent strong impact stress on it..
3. The ultrasonic transducer should be taken by hand with the clean gloves or fingerstall to prevent the oil or sweat to contaminate the electrode surface of it.
4. The main material of the ultrasonic transducer is lead zirconate-titanate ceramics, so please abide by the local Environmental laws and regulations when discarding.
